PIT WG outcomes maintenance plan

20 Nov 2014

For the mid-term, the PID IG will act as the contact point within RDA and provide information on access to PIT WG results. DKRZ will continue to host the active source code repository with future changes, and thus, also act as another contact and maintenance point. This is however not guaranteed. The git repositories at DKRZ are used in a productive environment, thus it is unlikely that it will disappear in the next 5+ years even if there is no future development. If DKRZ hosting policies change, the git repositories will be migrated to a public code repository such as Github.
