By continuing to be in the meeting, you are consenting to be recorded.

Leave Meeting   **Continue**

Agenda

1. **Welcome (5 minutes)**
2. **Co-chairs and group updates! (10 minutes)**
3. **Recap from P22 (5 minutes)**
4. **Revisions and Recommendation work plan (25 minutes)**
5. **New timeline (10 minutes)**
6. **Next steps (5 minutes)**

WG Rolling Notes

Rolling notes from regular sessions
https://docs.google.com/document/d/157x8nB0LKODUE1CviWqpVx07s29lEZUovI7bPXmY3wE/edit#heading=h.i3g9x44hk9os

Welcome to Mikiko and Lautaro!

Mikiko is part of the management team for the NII Research Centre for Open Science and Data Platform (RCOS). She is the Deputy Director and is the Senior Researcher for Cyber Science Infrastructure.

Mikiko has been very active in the GORC IM WG over the past 2 years, and helped develop the model as part of TG4 (Interoperability, Standards & Conventions).

Lautaro is the Executive & Technical Director of LA Referencia and developer of the LA Reference Software Platform (LR Harvester).

He has a long-standing interest in open science and has a background in computer science. He's currently a member of Center for Studies on Science, Development and Higher Education (Centro REDES) and has worked with RICYT, CAICYT-CONICET, and CAEU/OEI.

Ibero-American Network of Science and Technology Indicators (RICYT), Argentine Center for Scientific and Technological Information (CAICYT-CONICET), and Ibero-American Observatory of Science, Technology and Society (CAEU/OEI).

Change to GORC Governance

The GORC IG and GORC IM WG were separate but connected in the past, with distinct co-chairship.

Moving forward, any GORC WG will share co-chairship with the GORC IG with the exception of discipline-specific WGs (e.g. the Health Data Commons GORC profile WG).

Question for discussion: Could we shift the GORC IM WG meetings to last Thursday of the month at 12:00 UTC instead of 13:00 UTC?

P22 recap

We hosted 2 GORC IG, IM WG joint sessions and 2 BoF sessions for the Health Data Commons GORC profile WG. The links for the collaborative notes and recordings are in our rolling notes!

GORC IG, IM WG joint sessions:
- The Essential Elements diagram is very useful
- The model would benefit from revisions, evidence of relevance through framework mapping, implementation profiles, and a more interactive, friendly container.
- Support for adopters is an ongoing need, specifically showcasing the value and impact of using the model for various stakeholder groups.

Health GORC BoF:
- There is interest and need for this to move forward as a WG!
- Maintain close collaboration with Life Science Data Infrastructures IG
- Connections with implementations of the GORC model in related disciplines / cross-disciplinary considerations need to be represented

GORC model revisions and recommendation submission

Before applying to become the GORC II WG, we would like to resubmit the GORC model as an RDA recommendation.

1. Revise the model
   a. Consistent wording
   b. Reconsideration of Interoperability and Services & Tools (from adopter feedback)
   c. Consistent application of entities vs characteristics within and across essential elements
   d. Consistent granularity and level of detail across items of the same type
   e. Other?
2. Select and work with adopters
   a. SURF, REASON
3. Follow RDA guidelines for submitting recommendations

GORC model revisions and recommendation submission

How to approach revising the model (1)?

Considerations:
- Need to look at the whole model to ensure consistency
- Not introducing new items or concepts, or removing what's there - rework existing content

Suggested mechanism:
- 2 TGs: whole-model granularity (TG1), whole-model representation (TG2)
  - TG1 looks at the level of detail of each essential element in the model, and identifies items in each that are too granular/details and could be made less so.
  - TG2 looks at the wording of entities vs characteristics, make recommendations on which items need to change type or have updated wording to be consistent
- Submit for endorsement in September 2024?
  - Join a TG: now until 11 July (2 weeks)
  - TGs work on model: 11 July - 12 Sept (9 weeks - 3 weeks for human elements, 3 for technical, 3 for standards & conventions)
  - Full WG review: 12 Sept - 26 Sept (2 weeks, WG meeting on 26 Sept)

- We do not want to introduce more detail into the model as a revision, so focus on finding the most-broad essential element representation and make the rest of the elements match.

GORC International Implementation WG (GORC II WG)

Case statement to be drafted, and submitted for accelerated consideration - aim for community review during P23! (November 2024)

To include:
- Adoption support and feedback
- Profiles and "slices" of the model
- Implementation map of V1.0+ using the profiles

For WGs later on:
- New model versions
- Maturity levels

In the background: model representations (visualization, web apps), mappings to and from the model

Let one or more co-chairs know if you're interested in working on one of these!

To include:
Adoption support and feedback
Value proposition and impact, adoption starter kit
Mappings to and from the model
With other well-known and used models in the DRI and commons space
Profiles and "slices" of the model
"Slice" by cross-cutting theme (e.g. RDM, PIDs, security/AAI)
Commons type profiles (+commons type typology), discipline profiles
Knowledge graph of real-world profile implementations (+Speaker series analysis)
Implementation map of V1.0+
"How" to implement each consideration, links to resources, etc

For WGs later on:
New model versions (e.g. V2.0)
Wider landscape and literature review
Inclusion of research hardware, physical tools and samples/ROs
…
Maturity levels

Timeline

★ Join a TG

★ Meet with or work asynch within TG on human elements

★ Meet with or work asynch within TG on thuman elements (25 Jul ...)

Aug...

★ Meet with or work asynch within TG on Standards & Conventions (22 Aug - 12 Sept)
